

CGL & GALVALUME LINE SPARE PARTS

Sink Rolls

We manufacture and supply **Sink Rolls** made of superior quality materials that are tested for its efficiency and reliability. They can be customized as per the requirements of the clients.

Sink Roll works in a very corrosive environment such as molten zinc, galvalume, galvaneal, lead and aluminum. They can work under high temperatures and are resistant to corrosion. They are made according to international standards.

Stabilizer Rolls

Stabilizer Rolls are Manufactured using premium quality materials and are made according to international quality standards. They are highly appreciated for their features like corrosion resistance, high tensile strength, dimensional accuracy and low maintenance. They are extensively used in galvanizing plants, iron & steel processing plants, and heat treaters. They are available in various customized sizes and specifications as per the client demands.

Entry Snouts for CGL/Galvalume

Entry snouts are used as the last guide cum insulation chamber and fixed just prior to the zinc bath.

The strip exit side of the snout is dipped in to molten zinc. The exit side thickness of the snout is usually 65 to 80 mm High alloy low carbon stainless steel. The snout is inclined to a certain angle. It is different for each Plant Manufacturer.

Galcon makes Snout, Stab Roll, Sink Roll, Arm for all rolls, Stellite / Canalloy bush for All the reputed manufacturers.

Galcon's Special Product for all lines :

- ***Zinc Pump***
- ***Pneumatic Bottom Drosser***

Arms for Sink Roll & Stabilizer Roll
